Flexible Mineral Surfaces

*Crafted in modified clay and
natural stone powder*

INTRODUCING FORMA

FORMA INTRODUCES A NEW FREEDOM IN ARCHITECTURAL SURFACE DESIGN

Crafted from modified clay and natural stone powder, this innovative flexible mineral material captures the depth, movement and authenticity of natural stone - while remaining remarkably lightweight, thin and adaptable. It is a surface designed not only for walls, but for the architectural moments conventional materials struggle to reach: sweeping curves, sculptural columns, feature ceilings, refined bathrooms, interior statements and transformative renovation projects.

From soft travertine and mineral limestone to rammed-earth textures, hand-worked stone and expressive three-dimensional forms and its flexibility allows design to move beyond the flat plane. Surfaces can wrap, flow and connect - turning ordinary walls into monolithic architectural features without the weight, disruption or extensive construction traditionally associated with stone cladding.

FORMA is not simply a decorative finish. It is an architectural surface collection created for designers, homeowners and visionaries seeking a more intelligent way to introduce texture, warmth and material depth into modern living.

FORMA SURFACE

FORMA SURFACE is a curated collection of refined flexible mineral finishes, created to bring the quiet depth and organic character of stone into contemporary interiors and architectural spaces. From the cloud-soft brightness of Nuvola and Alba, to the sun-warmed mineral movement of Siena and Duna, each surface has been selected for its natural tone, subtle texture and timeless versatility. Rosato completes the collection with a distinctive soft coral mineral expression, offering a more individual and expressive architectural statement. Designed for walls, curves and considered renovation, FORMA SURFACE creates seamless, tactile spaces with the warmth of natural stone and the freedom of a lightweight flexible material

Category: Flexible Stone

Size: 2900x1200mm

Useable Area: Interior/Exterior Walls

Thickness: 3-5mm

FORMA CONTOUR

FORMA CONTOUR celebrates depth, rhythm and architectural form. Defined by sculptural profiles, flowing lines and dimensional textures, this collection is designed to transform walls, columns and feature surfaces into expressive design elements. Colonna Beige introduces a refined classical rhythm, while Onda brings a softer wave-like movement. Infinito creates a continuous linear texture with a contemporary architectural feel, and Colonna Bianco and Colonna Grigio offer elegant curved pillar finishes in warm white and mineral grey tones. Created for spaces that demand more than a flat surface, FORMA CONTOUR brings shadow, movement and sculptural presence to modern architecture.
